

African Americans & Alzheimer's Genetic Research Study: Help Us Continue to Find Answers

Recruitment for the genetic study is still ongoing. Thanks to your commitment to make a difference, we have over 700 participants enrolled in the study. This participation level led to the discovery of a new gene, *ABCA7*, found in African Americans. Despite the accomplishments we have more work to do.

We need:

- Two or more family members affected with memory loss or dementia
- Men and women affected with memory loss or dementia
- 60 years of age or older

Study participants will:

- Perform memory testing
- Complete consent forms
- Provide a blood sample
- Share medical history
- Receive monetary compensation
- Not have to travel

If you have an interest in participating, know of someone who may be interested, or would like additional information, please go to www.ncatad.com to provide us with your contact information, email us at tdstarks@ncat.edu, or call Takiyah D. Starks, M.S. at:

888.248.2808

Are You a Current or Former Study Participant? Please Keep Us Up-to-Date.

If your family has participated in our studies, please download an update form from aad.coachhealth.org and submit. This information allows us to maintain accurate information.

Alzheimer's. It Runs in Our Families.
